

DVS-CONNECT

Description

"DVS-Connect" software is used for remote viewing of video signal and telemetry data only.

"DVS-Connect" software allows connecting via LAN / Internet to DVS-Recorder recording software and view in real time video from ROV cameras, connected to "DVS Recorder" or to "DVS R-Client".

So, it is possible to control in real time everything in ROV's cameras video range using only a network connection with logging computer and without any video capture device and additional video source.

The program cannot be used to record video files.

Features

- Connection with "DVS Recorder" software via network (LAN / Internet).
- Real time viewing of video signal from camera, connected to logging computer with "DVS Recorder".
- Real time viewing of video signal from cameras, handled with "DVS R-Client".
- Full-screen mode feature.
- Frame rate control (number of frames per second to receive)

Minimal System Requirements

CPU	Intel Celeron 667 MHz
RAM	256 MB
Video	64 MB
Operating System	Microsoft Windows XP
DirectX	DirectX 8.0 and higher
